**DETAILED ACTION*****Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohtani et al. US 2002/0000613, in view of Harvey US 6,057,227.

Ohtani et al. discloses a TFT device and method of making including an insulating film (102) over an electrode (101), a contact hole in the insulating film, and a pixel electrode (104) embedded in the contact hole, wherein the pixel electrode is ITO and is baked, and the device can be a video camera, a still camera, a projector, etc. (see figs. 1A-2C and related text).

Ohtani et al. however does not disclose the specific steps of making contact openings for the pixel electrode.

Harvey teaches various methods for making electrodes including having a contact hole and a "concave portion" connected to the contact hole.

Therefore it would have been obvious to one of ordinary skill in the art to use the techniques and structure of Harvey to make the pixel electrodes of Ohtani et al., because it allows for a more accurate and reliable formation of connections of electrodes.
